From the Editor

Putting together this edition of *Machinage 4.0* has felt different.

This magazine is more than a collection of articles, poems, stories, and artworks. It is a place where different thoughts, feelings, and imaginations come together.

Every contribution carries a part of someone's mind, memory, or way of seeing the world.

I sincerely thank all the contributors, my editorial team, our faculty coordinators, and the college administration for their constant support.

As this chapter of college life comes to an end for me, I feel grateful to be part of something that preserves the voices and memories of our campus.

Happy Reading,
Devdeep Saha

Arts & Artists

MACHINAGE 4.0

From the **Principal's Desk**

As we celebrate the rich cultural heritage of our college, I am delighted to share my thoughts with you through this 4th Edition of college magazine "MACHINAGE".

Our AIEM is a vibrant community that thrives on diversity, creativity, and inclusivity. Our college culture magazine is a testament to the talent and creativity of our students. It showcases the diverse perspectives, experiences, and artistic expressions that make our community unique.

I encourage students, faculties, and staff to continue exploring their passions and interests through various forms of art, literature, music, and performance. Your creative endeavours not only enrich our college culture but also contribute to your personal growth and development.

I congratulate the editorial team and contributors to this magazine for their hard work and dedication. Your efforts have resulted in publication that reflects the excellence and creativity of community. a remarkable our college

Best wishes

Dr. Jinia Datta,
Principal
Abacus Institute of Engineering and Management

From the **Registrar's Desk**

I'm thrilled to share the exciting news of the release of our 4th issue of MACHINAGE, our college magazine. This makes significant achievement for our institution, and I extend my warmest congratulations to the entire editorial team and all contributors who have brought this publication to life.

Machinage 4.0 isn't just a compilation of articles and stories; it's a reflection of the creativity, talent, and dedication of our students. It showcases their diverse interests and passions, providing a platform for expression and knowledge-sharing among peers. I encourage every one to take a moment to peruse the magazine and appreciate the collective effort behind its creation.

I want to express my gratitude to the editorial team for their unwavering commitment and hard work in realizing this project. Additionally, I extend thanks to the faculty and staff whose support has been invaluable throughout this endeavor. May Machinage serve as a continued source of inspiration and a unique platform for exploring inner potential and creativity for our students, underscoring the excellence of our institution.

Mr. Devmalya Banerjee,
Registrar
Abacus Institute of Engineering and Management

TEACHERS' CORNER

জীবনের মানে

ড সুব্রত গরাই,
সহকারী অধ্যাপক,
বিএসএইচউ বিভাগ

জীবন কখনো সরল সমীকরণ নয়,
এখানে অনেক অজানা রয়ে যায়।
মানুষ যতই বোঝার চেষ্টা করুক,
কিছু প্রশ্ন চিরকাল উত্তরহীন।

কেউ খোঁজে সাফল্যে,
কেউ খোঁজে ভালোবাসায়,
কেউ আবার নীরবতার মধ্যে
নিজের অর্থ খুঁজে পায়।

হয়তো জীবনের মানে
কোনো বড় আবিষ্কার নয়,
বরং ছোট ছোট মুহূর্তে
লুকিয়ে থাকা আনন্দ—
একটি ভোর, একটি গান,
একটি আন্তরিক হাসি।

শেষ পর্যন্ত মানুষ বুঝতে শেখে—
জীবন মানে শুধু গন্তব্য নয়,
বরং সেই দীর্ঘ পথ
যেখানে প্রতিটি পদক্ষেপই এক একটি গল্প।

স্বপ্ন ও বাস্তবতা

ড জয়দেব বিশ্বাস,
সহকারী অধ্যাপক,
বিএসএইচউ বিভাগ

স্বপ্নের আকাশ সবসময়ই বিস্তৃত,
সেখানে কোনো সীমা নেই,
কোনো বাধা নেই।
মানুষ উড়তে পারে,
অসম্ভবও সেখানে সম্ভব হয়ে ওঠে।

কিন্তু বাস্তবতা মাটির মতো কঠিন,
এখানে প্রতিটি পদক্ষেপের হিসাব আছে,
প্রতিটি পথের শেষে প্রশ্ন থাকে—
তুমি কি সত্যিই প্রস্তুত?

স্বপ্ন আর বাস্তবতার মাঝখানে
মানুষের জীবন দুলে ওঠে,
কখনো আশা জয়ী হয়,
কখনো ক্লান্তি চুপচাপ বসে থাকে।

তবু মানুষ আবারও স্বপ্ন দেখে—
কারণ স্বপ্ন ছাড়া
এই কঠিন পৃথিবীতে
বেঁচে থাকা খুব সহজ নয়।

জীবনের মানে

জীবন কখনো সরল সমীকরণ নয়,
এখানে অনেক অজানা রয়ে যায়।
মানুষ যতই বোঝার চেষ্টা করুক,
কিছু প্রশ্ন চিরকাল উত্তরহীন।

কেউ খোঁজে সাফল্যে,
কেউ খোঁজে ভালোবাসায়,
কেউ আবার নীরবতার মধ্যে
নিজের অর্থ খুঁজে পায়।

হয়তো জীবনের মানে
কোনো বড় আবিষ্কার নয়,
বরং ছোট ছোট মুহূর্তে
লুকিয়ে থাকা আনন্দ—
একটি ভোর, একটি গান,
একটি আন্তরিক হাসি।

শেষ পর্যন্ত মানুষ বুঝতে শেখে—
জীবন মানে শুধু গন্তব্য নয়,
বরং সেই দীর্ঘ পথ
যেখানে প্রতিটি পদক্ষেপই এক একটি গল্প।

Megawatts Alone Won't Deliver Panchamrit

Dr. Bishal Dey
(ME)

India's Panchamrit commitments — 500 GW of non-fossil capacity by 2030 and a decisive shift toward clean electricity — are ambitious and necessary. But capacity targets alone do not transform energy systems. Engineering does.

The national conversation often treats the transition as a straightforward expansion of renewables. Solar and wind will undoubtedly dominate new additions. Solar, in particular, is India's most scalable resource. Rooftop installations, large solar parks, and agricultural feeder solarisation can reshape daytime demand and reduce distribution stress. Wind power complements solar by providing geographic and seasonal diversity. Hybrid projects will help smooth output as renewable penetration rises.

But scale introduces complexity. As solar's share increases, evening peaks and seasonal variability become structural grid challenges. Without adequate storage and transmission expansion, renewable growth risks curtailment and instability. Pumped hydro and battery storage must expand alongside generation capacity. The transition cannot rely on megawatts alone; it must integrate grid physics from the outset.

Water adds another layer of urgency. Coal-based thermal plants are highly water-intensive and increasingly vulnerable to drought and groundwater depletion. In a climate-stressed country, energy planning must account not only for carbon but also for hydrology. Renewable energy's minimal operational water footprint offers a strategic advantage. Even firm low-carbon expansion — including nuclear — must be sited and designed with cooling realities in mind.

Yet intermittency cannot power heavy industry, data centres, refineries, and megacities that require uninterrupted electricity. Clean firm supply must scale alongside renewables. A measured expansion of nuclear capacity, particularly in coastal configurations, can provide high-capacity-factor, low-carbon baseload that reduces structural dependence on coal. Its role is stabilizing — not substituting — within a diversified system.

Coal itself will not disappear overnight. A managed decline is more realistic than abrupt elimination. Efficiency upgrades, retirement of older subcritical plants, and predictable carbon pricing can gradually reduce emissions intensity without economic disruption. Carbon pricing, if calibrated carefully, can improve efficiency and fund grid modernization.

Beyond electricity, the transition must extend to fuels. Biofuels offer interim emission reductions in transport where electrification is slower to scale, provided feedstock policy avoids food–fuel and water conflicts. Green hydrogen, powered by renewables, will be essential for decarbonizing steel, fertilizers, and heavy mobility. Climate strategy cannot be confined to the power sector alone.

The key to a smooth transition is sectoral alignment. Residential and agricultural demand can increasingly rely on decentralized solar. Commercial buildings can integrate rooftop systems with storage. Heavy industry requires firm low-carbon supply supported by nuclear and renewable hybrids. Transport must electrify where feasible and shift to biofuels or hydrogen where necessary.

Dr. Rupsa Roy
Faculty ECE

India does not need a single “cleanest” energy source. It needs a coherent portfolio.
Solar for scale. Wind for complementarity. Hydro and storage for balancing. Nuclear for
firmness. Biofuels and hydrogen for hard-to-abate sectors. Coal in disciplined retreat.
The real danger is not ambition. It is fragmentation — adding capacity without
aligning water constraints, grid readiness, financing reform, and sector-specific demand.
Panchamrit is achievable. But the transition must be sequenced, water-aware, financially viable, and structurally integrated. In energy policy, physics ultimately overrides rhetoric. If India engineers this shift with discipline, it will secure not just cleaner power, but
a resilient and competitive economy. If it does not, the cost will be measured not only in
emissions — but in in stability.

সময়ের সামনে

ড রাজন মন্ডল
সহকারী অধ্যাপক,
বিএসএইচউ বিভাগ

সময় বড় নীরব এক পথিক,
কথা বলে না, তবু সবকিছু বদলে দেয়।
গতকালের হাসি আজ স্মৃতি,
আজকের স্বপ্ন কাল হয়তো ইতিহাস হয়ে যায়।

মানুষ ভেবে চলে—
সবকিছু তারই হাতে, তারই নিয়ন্ত্রণে,
কিন্তু সময়ের সামনে দাঁড়ালে বোঝা যায়
আমরা কেবল পথের যাত্রী।

কখনো সাফল্যের আলো ঝলমল করে,
কখনো ব্যর্থতার ছায়া নেমে আসে নীরবে,
তবু সময় থামে না,
সে শুধু সামনে এগিয়ে যেতে শেখায়।

হয়তো এই চলার মধ্যেই লুকিয়ে আছে জীবন—
হারিয়ে ফেলা, আবার খুঁজে পাওয়া,
আর একদিন নিঃশব্দে বুঝে যাওয়া
যে সবকিছুই ছিল সময়ের কাছে ধার করা।

একাকিত্ব

ড শাশ্বত সাহু,
সহকারী অধ্যাপক,
বিএসএইচউ বিভাগ

মানুষের ভিড়ের মাঝেও
কখনো কখনো এক অদ্ভুত নীরবতা নামে।
চারপাশে কথার ঢেউ ওঠে,
তবু মনে হয় যেন কেউই সত্যি শুনছে না।

রাতের শেষে যখন শহর ক্লান্ত হয়ে ঘুমিয়ে পড়ে,
তখন জানালার পাশে বসে মানুষ ভাবে—
এই দীর্ঘ পথ চলার শেষে
কেউ কি সত্যিই অপেক্ষা করছে?

একাকিত্ব সবসময় দুঃখ নয়,
কখনো তা গভীর আয়নার মতো—
যেখানে মানুষ নিজের মুখই নতুন করে দেখে।

হয়তো তাই নীরব রাতগুলো
কিছু প্রশ্ন রেখে যায়,
যার উত্তর ভোরের আলোতেও
সম্পূর্ণ মেলে না।

The Pulse of Structures

Pritam Ghosh
Assistant Professor, CE

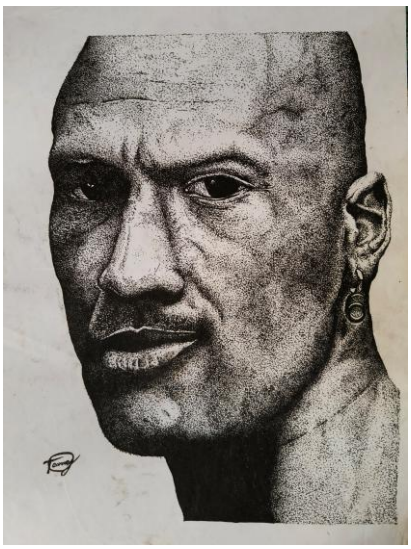

In silent beams and columns tall,
Where steel and concrete bear the load of all,
A hidden watch begins its role,
To guard the strength of every soul.
Sensors whisper through the frame,
Reading stresses none can name,
Vibrations dance in coded streams,
Revealing truths of structural dreams.
A bridge that spans a restless tide,
A tower standing tall with pride,
Each bolt and joint, each welded seam,
Is watched within the data stream.
Through storms that rage and quakes that roar,
Through years of use and loads galore,
The structure speaks in signals clear,
Of growing strain or creeping fear.
Engineers read the silent signs,
Graphs and waves and subtle lines,
To mend before the cracks appear,
To keep the future strong and clear.
For safety lies not just in might,
But in the wisdom to foresee the fight,
And in the science that can see—
The health of every beam and tree.
So let the sensors softly stay,
Guardians both night and day,
Ensuring structures brave and true,
Stand strong for generations through.

Iran–Israel Tensions and India's Delicate Balancing Act

Sayanti Das,
Assistant Professor,
Department of Basic Science and Humanities

The Iran-Israel relations have continued to play a major part in shaping the Middle East. For quite some time, Iran and Israel have continued to be locked in a competition fueled by security concerns, as well as differences in ideology. Israel views Iran's growing military and nuclear capabilities as a major threat to its national security. Iran, on the other hand, has continued to express serious opposition towards the presence and activities of Israel in the Middle East. Iran has continued to have serious ties and affiliations with other groups such as Hezbollah and Hamas.

The Iran-Israel relations have continued to differ from the usual conventional wars that take place in the open. Instead, the relations have continued to be expressed in indirect forms. At times, the relations have continued to resemble a competition that takes place behind closed doors. At times, the Middle East desert skies have continued to be lit up by the presence of missiles and drones, which have been deployed in the Iran-Israel relations. However, beneath the sand, there have continued to be the presence of pipelines and trade routes.

Tanmoy Bhowmick
Diploma ME

Every incident brings the region to the brink of a catastrophic situation while both
parties tread carefully to avoid a full-scale war.
In this complex scenario, India has to walk a tightrope. India has good relations with both Iran and Israel, each of whom has a special place in its foreign policy. Israel has a special place in India's
defense diplomacy. Israel supplies India with high-tech defense equipment, surveillance devices, and drones. The association has helped India strengthen its defense capabilities in recent times.
On the other hand, Iran has a special place in India's regional and economic diplomacy. The Chabahar port project allows India to gain access to Afghanistan and Central Asia without going through its traditional rival, Pakistan. Iran has also been a valuable partner for India in terms of its energy needs in the past.
Considering these complex relations, India has adopted a delicate stance. Instead of taking sides, India
has always been a vocal supporter of peace talks. The stability of the region is of great concern to
India, considering the large volumes of oil it imports from the region and the large number of its citizens employed in the region.
However, when we move into the future, it is believed that this Iran-Israel rivalry will continue in its
present form, i.e., a long shadow war. Nevertheless, it is also believed that there is a possibility of a
sudden clash, as one wrong move could lead to a wider crisis in the region.
When we move into the future, it is believed that for India, the road ahead will be one of steady diplomacy. The tensions in the Middle East, as mentioned in the given text, will continue to ebb and flow, and it is believed that India will continue to walk a tightrope in its relationship with both sides.

Too Close

Shankha Shubhra Goswami
Faculty ME

Are you still lying there? let the wind flow through your curly hair
Today, we will have dinner together whatever cold fries you prepared.
It is raining heavily and I am completely
Drenched in rain
It is slowly soaking into my hair too giving me immense pain.

You look so beautiful in that red dress

Your sweet smile always makes me stress free and worriless.
Still remember those moments we used to spent dancing together
How can my heart break, when you are tightly holding it forever.

I am screaming out loud,
Standing alone at the edge of a shore.
I have been waiting outside for a long time,
I have arrived, come on baby!!.. open the door.
Next moment, everything will be silent
And my whisper will echo in your ear.
We will sail together peacefully,
holding each other's hand in the river of tear.
Your heart will beat fast and your eyes will shine
I can't share your eternal love, let it be mine.

Why are you dancing alone? I want to feel your warm breath and come closer

I can match your steps
darling, from this far.
Time passes by looking at
the night sky hoping to find
you
Unfortunately, the stars are
mostly covered by the
clouds making it very few.
The rain has stopped and
the pole star is shining
bright from the northern
zone
Now it's time to return
back home broken and
disheartened without
leaving you completely

alone!!.

Red Wheat, Red Women

Dr. Shibu Gorai, Assistant Professor,
Department of Basic Science and Humanities

In the morning the factory whistles
like a tired metal bird.

Women walk through fog and brick dust,
carrying the sun in their lunch tins.

One of them plants a hammer
in the soil of the sky.
From it grows
a forest of unfinished revolutions.

Another woman opens her palm
and a railway line appears.
Trains of bread roll through the clouds
feeding the silent villages.

The party poster on the wall
blinks once.
Its paper mouth whispers
that history is only a door
waiting for a thousand hands.

In the fields, wheat bends
like comrades greeting each other.
The wind counts them
not as bodies
but as futures.

A woman lifts a red scarf
and the moon becomes a worker's lamp.

Night shifts begin in the stars.
Galaxies queue quietly
for equal light.

Gene Editing and Personalized Medicine: Rewriting the Code of Life

Suvendu Kar
Assistant Professor,
Department of Civil Engineering

For centuries, medicine treated disease by managing symptoms. Today, a quiet but seismic shift is underway — one that targets the very root cause of illness written in our DNA. Gene editing, powered by tools like CRISPR-Cas9, is no longer a distant scientific promise; it is a clinical reality transforming personalized medicine as we know it.

What Is Gene Editing?

Gene editing refers to technologies that allow scientists to precisely add, remove, or alter DNA sequences within a living organism's genome. The most powerful and widely used tool is CRISPR-Cas9, which acts like molecular scissors — guided by a programmed RNA sequence, it locates a specific gene and cuts it with remarkable precision. More refined successors — base editing and prime editing — can now correct single-letter mutations in DNA without even cutting the double strand, reducing the risk of unintended errors.

From Laboratory to Clinical Reality

The landmark moment came in December 2023, when the U.S. FDA approved Casgevy — the world's first CRISPR-based therapy — to treat sickle cell disease, a condition that has caused suffering for millions across generations. A patient's own stem cells are extracted, precisely edited to produce healthy hemoglobin, and reintroduced into the body — effectively offering a functional cure. Since then, the CRISPR clinical pipeline has exploded. As of early 2026, over 250 clinical trials involving gene-editing therapies are registered globally, targeting diseases from hereditary blindness and high cholesterol to advanced cancers and rare metabolic disorders.

A Milestone: The First Truly Personalized CRISPR Therapy

Perhaps the most extraordinary recent breakthrough was the treatment of KJ Muldoon, an infant born with a rare genetic disease, who became the first human to receive a bespoke CRISPR therapy — designed specifically for his unique mutation and delivered directly inside his body (in vivo), not in a lab. This therapy was developed and administered in just six months, signaling the dawn of truly individualized genetic medicine.

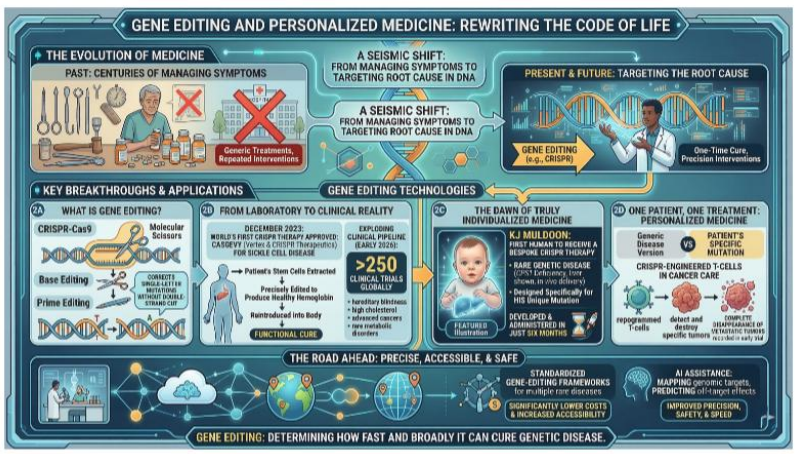

Personalized Medicine: One Patient, One Treatment

Gene editing is the backbone of personalized medicine's future. By analyzing a patient's individual genetic profile, clinicians can now design treatments that target their specific mutation — not a generic version of the disease. In cancer care, CRISPR-engineered T-cells are being reprogrammed to detect and destroy tumors specific to that patient's biology, with one early-stage trial recording complete disappearance of metastatic tumors.

The Road Ahead

Researchers are also working on standardized gene-editing frameworks that could serve multiple rare diseases without requiring a fully custom approach for each patient — significantly lowering costs and increasing accessibility. As AI increasingly assists in mapping genomic targets and predicting off-target effects, the precision, safety, and speed of gene therapies will only improve.

Gene editing is no longer asking if it can cure genetic disease — it is now determining how fast and how broadly it can do so.

Telemedicine and 5G: Redefining the Future of Connected Healthcare

Suvendu Kar

Assistant Professor,
Department of Civil Engineering

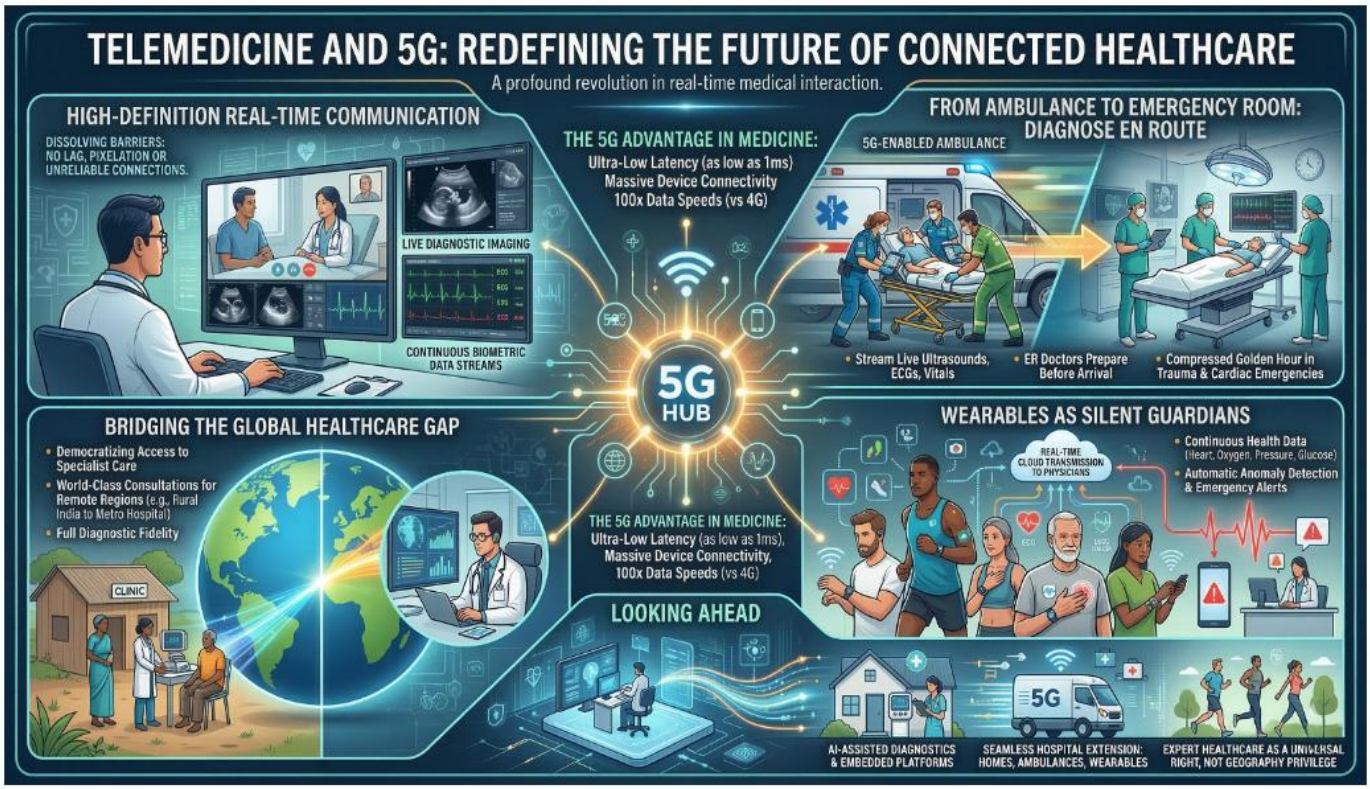

The intersection of telemedicine and the fifth-generation (5G) wireless technology is brewing one of the most significant revolutions in contemporary healthcare in silence. It is now possible to perform what previously took a visit to a hospital in real time and regardless of place of destination with a degree of accuracy and speed never thought of before.

The 5G Advantage in Medicine

Fundamentally, 5G has three transformative capabilities in healthcare, namely, ultra-low latency (as low as 1 milliseconds), a vast number of devices, and a speed of data transfer that is 100 times faster than 4G. And these are not mere technical measures, as applied to a medical context, which is the difference between saving a life and missing out on it. The classic telemedicine used to have a lag, pixaled video calls, and poor connections. That limitation is disintegrated with 5G. Doctors are now able to get high-definition, real-time video, live diagnostic x-ray, and constant biometric data feeds of patients miles away without any conspicuous delay.

From Ambulance to Emergency Room — Before Arrival

Pre-hospital emergency care is one of the most vivid examples of using 5G-powered telemedicine.

In ambulances with 5G capability, paramedics now have the capability to live stream live ultrasounds, ECG readings and patient vital signs to emergency room physicians even when the patient is on the road. When the ambulance arrives, the diagnosis is already known by the ER team and the surgical team is already on-hand and the appropriate amount of blood or medication is already ordered. This paradigm shift as the one where the diagnosis is performed within the arrival is a paradigm shift, as the case-saving in the thousands of people that every day is estimated to be saved by this dramatic reduction of the golden hour of emergency that could save the lives of numerous people in trauma and cardiac emergencies.

Wearables as Silent Guardians

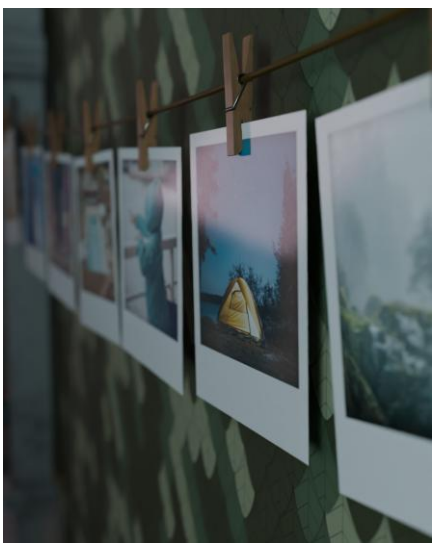

Wearable medical devices are also given a second wave with 5G. The devices used as wearable ECG patches, smartwatches, and implantable biosensors today produce constant streams of health information, such as heart rhythm, blood oxygen, blood pressure, and glucose levels, and send them to the cloud-based health platforms and physicians in real time. The fratricide is signaled as soon as something out of the ordinary occurs, be it atrial fibrillation, dangerous soaring blood pressure or a silent heart attack) and the emergency signal goes off automatically (occasionally even before the patient experiences anything).

Bridging the Global Healthcare Gap

Democratization of access to special care, perhaps, is the most socially important contribution of 5G telemedicine. Communities in rural areas, remote villages, and developing nations which have no specialized physicians, can now get in touch with world leaders in the hospitals of the various countries or even other nations. An example where this can be used is a patient in a remote part of India who can get a real-time cardiac checkup with a specialist in a metro hospital - and the diagnostics is fully faithful.

Looking Ahead

Remote care is going to remain blurred with face-to-face care as 5G networks continuously develop all over the world, and AI-aided diagnostics become a part of tele-medicine systems. The hospital of the future can be much more than just physical building, in fact, it can recede into homes, ambulances and even devices on your clothes, where good healthcare is no longer exclusive to the specific geographic area, but is a universal right.

POEMS

The Ending Has a New Beginning

Ankit Das
2nd year Diploma EE

Sometimes life pulls us down,
Sometimes it makes us frown,
Sometimes we hate it,
Sometimes we want to get rid of it.
Sometimes loved ones hurt us,
Sometimes hated people come close to us,
Sometimes we wish to cry,
Sometimes we want to die,
Sometimes the essence of living dies,
Sometimes our lips smile, but our hurt cries.
Sometimes dreams shatter,
Sometimes we come across some touchy matters,
Sometimes life takes us to fag endings,
Sometimes these endings give birth to new beginnings.

The Quiet Courage

Labani Mukherjee
2nd year Diploma

They rise before the sun has stirred,
With hands that ache, yet never deterred.
No medals gleam upon their chest,
But in their silence lies the best.

A mother's voice, both soft and strong,
Guides a child through right and wrong.
A worker's sweat, a farmer's field,
Stories of strength the world won't yield.

They face the storms, the daily fight,
With steady hearts and quiet might.
No spotlight shines, no crowd will cheer,
Yet their courage holds us near.

For heroes walk in humble shoes,
In every choice they daily choose.
The quiet ones, who stand, who stay
They shape the world in unseen ways.

Whispers Of Ramzan

Ashna Karim
B.Tech CSE 1st Year

Before the sun paints gold across the sky,

The faithful rise while the world still sleeps.

A quiet meal, a whispered prayer,

And patience begin its gentle journey.

Throughout the day, hunger walks beside us,
But faith walks stranger in the heard.

Kind words, calm thoughts and grateful souls,
This is the lesson Ramzan brings.

When evening finally touches the horizon,
Dates are shared and prayers rise high.

For Ramzan is not only fasting from food,
But filling the soul with mercy and light.

Unwritten Pages

Fardin Kazi
1st year , B.Tech CSE

The campus hums with footsteps,
each echo a story waiting to be told.
We are authors of beginnings,
scribbling futures in margins of today.
Dreams spill across notebooks,
ink turning into bridges,
connecting what we are
to what we hope to become.
Not every line is perfect—
some smudge, some fade—
but even flaws
carry the weight of growth.
And when the last bell rings,
we will leave behind
not just memories,
but unwritten pages
that others will continue to fill.

Man in the Ruins

Rounaque khan
1st year , B.Tech CSE

In this broken room,
Walls cracked with memories of you,
I sit alone—
as if life has quietly abandoned me.
My hands hold nothing,
my eyes carry questions you took away with you.
It's not water dripping from the ceiling,
it's the pain leaking from inside me.
This room was never a ruin,
it felt like home when you were here.
Now every corner stands as proof
that love, too, can leave.
I am helpless, yes—
because even waiting for you
is no longer enough.
So I remain in this silence.

Foundation

Sahil Ali Haque
1st year , B.Tech CSE

Brick by brick and bit by bit,
We find the place where the pieces fit.
No jagged edges, no broken ties,
Just a vision reflected in our eyes.
For in every craft and every line,
We seek the grace of a grand design.

Code in the Quiet

Sayantani Karmakar
1st Year, B.Tech CSE

In silent labs where circuits glow,
And midnight ideas start to grow,
We write in code, in dreams, in light,
Turning questions into sight.
Each line a step, each bug a guide,
Through logic's maze where thoughts collide,
A world is built with keys and mind,
In every error, truth we find.
Machines may hum with steady tone,
But every spark begins alone,
A curious heart, a patient hand,
Can shape the future we have planned.
So let the screens reflect our aim,
To learn, create, explore the same,
For every program we design,
Is one small step in humankind.

ছলনাময়ী বিশ্বস্ত প্রেম

আমি তোমাকে প্রেম দিতে চেয়েছিলাম, বিনিময়ে তুমি দিলে

উষ্ণ হালকা যৌনতার ভালোবাসা। আমি তোমাকে বিবেক দিতে চেয়েছিলাম,

বিনিময়ে তুমি দিলে আবেগের মিষ্টতা। আমি তোমাকে বাস্তব শেখাতে চেয়েছিলাম,

বিনিময়ে তুমি শেখালে অভিনেত্রীর ভূমিকা। আমি তোমাকে বিশ্বাস দিতে চেয়েছিলাম,

বিনিময়ে তুমি শেখালে অভিনেত্রীর
ভূমিকা। আমি তোমাকে বিশ্বাস দিতে
চেয়েছিলাম,
বিনিময়ে তুমি আমাকে সাজালে
অবিশ্বাসী।
বলতে পারো তুমি
ওগো! ছলনাময়ী নারী
কতদিন থাকবে তোমার ওই
যৌবনের ছলনা? যৌবন যখন
শুকিয়ে যাবে
জীবন হবে মরুপ্রায়, মরু দেশেতে
সাগর ভেবে প্রেম খুঁজবে মরীচিকায়।
মরীচিকা সলিলে দেখবে সেই
প্রেমাঙ্গ,
নিজের হেলায় যেসব প্রেম তুমি
করেছ ভঙ্গ। পাবেনা তা ফিরে
কত অনাদরে,
ভেঙেছ যেসব নিষ্পাপ বিশ্বাস।
বিষানলে ঘড়া পূর্ণ হয়েছে, করেছি
অবিশ্বাস
জানি তব রূপ আছে, রস আছে,
আছে গন্ধ
তবে কেন তুমি থাকো বহুরূপী,
সেজে থাকো অন্ধ?
কোমল হৃদয় বিগলিত হয়
তোমার ঐ মায়াবী বদনে
তুমি করো প্রেম নাটকীয়তার
এই সুন্দর বিশ্ব ভুবনে।
ওগো...সখি-
বলছি তোমায়-
করিও ক্ষমা
ভুলটা আমারই ছিল।
ভুল করে আমি ডুব দিয়েছিলাম
ছোট্ট সলিলে খুঁজতে শঙ্খ,
বিনিময়ে আমি পেলাম শরীর জুড়ে

Is ZERO (0) means nothing?

Sugnik Roy
(CSE, B.Tech 2nd year)

Do you really think Zero is nothing?
Is it just a circle on a paper?
Is it really useful in our daily life?
What actually is Zero?

Zero also plays a neutral role in every perspective.
It gives us the understanding of excess and deficiency.
It shows the balance between gain and loss, strength and weakness.

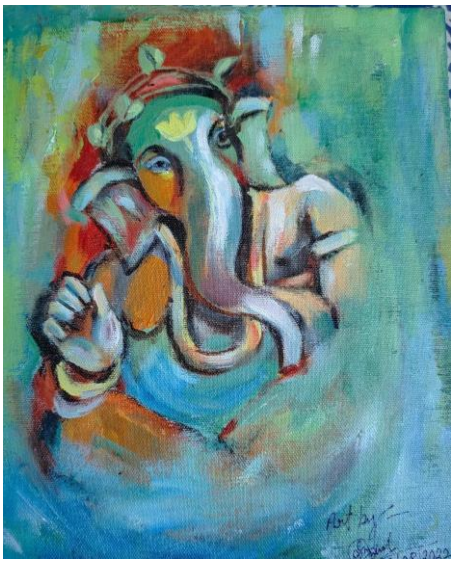

In mathematics, 0 represents nothing, yet it gives to the values like 10, 100, and 1000.
It works as the additive identity in equations and separates positive and negative numbers at the number
line.
Without zero, standards like algebra, calculus, or even infinity (∞) is impossible to understand.

In technology, a computer only understands the binary numbers of 0 and 1.
This small digit enables create software program, artificial intelligence, and modern digital systems.
In science and physiology, the human body depends on stability close to 0.
For example, the regular body keeps a neutral pH around 7 and a stable temperature near equilibrium.

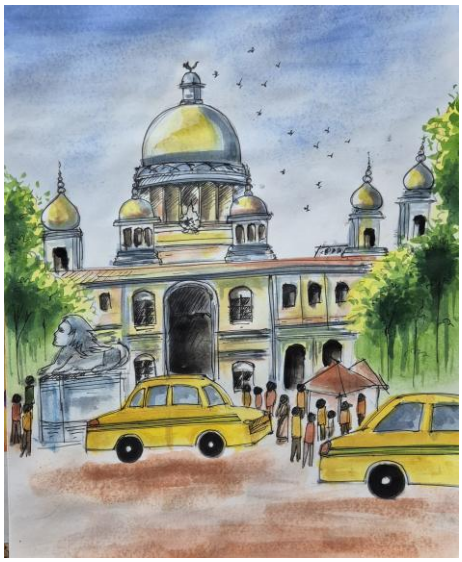

In psychology, zero can represent empty mind or a moment when someone feels lost.
But psychologists additionally say that emptiness can become a start for a new thoughts and motivation.
Emotionally, many people feel like zero after failure or heartbreak.
At that moment we may start to feel our life meaningless and confidence gets low.

But zero is also the origin of each graph and coordinate system.
Since then, growth, direction, and progress begin.
So zero teaches us that sometimes nothing is the place where everything begins.

The Dreaming Clock

Eman Haque
Diploma 1st

Upon the wall it hangs in grace,
Its hands suspended, lost in space.
No tick, no tock, no measured beat,
But whispers drift where dreams compete.

It dreams of skies where time dissolves,
Of endless paths the stars evolve.
It sees tomorrow fold with past,
A tapestry where moments last.

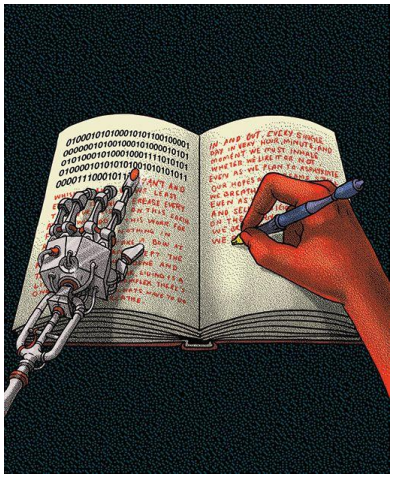

The hours bloom like petals wide,
Minutes flow like oceans' tide.
In silence deep, its visions sing—
A clock that dreams of everything.

And though the world demands its chime,
It lingers still, beyond all time.
For not all lives are meant to keep,
Some are built to dream, not sleep.

The Echoes Of The Hall

Gopalji Thakur
B.Tech 1st CSE

A call to where our dreams begun.
Between the rows of wooden desks,
We faced the books and daily tests.
With chalk-dust clouds and ink-stained hands,
We mapped the stars and distant lands.
The hallways hummed with hurried feet,
Where laughter made the hardest lessons sweet.
From whispered secrets by the wall,
To cheering loud in the open hall,
We weren't just passing through the years,
But shedding skins and conquering fears.
Now the corridors are still and vast,
But the echoes of those days will last.

Age of Machines

Injammam Haque Mallick
B.Tech 1st year ME

In the age of machines we live today,
Where gears and codes show us the way.
From tiny chips to engines strong,
They help our daily lives move along.
Machines can build, machines can fly,
They reach the land, the sea, the sky.
With every click and turning wheel,
They change the way we work and feel.
But human minds still lead the way,
Creating tools for a brighter day.
For though machines are smart and fast,
Human wisdom will always last.
Together they shape tomorrow's scene,
A future shared by man and machine.

হিমশোক

পরিণীতা দত্ত
Diploma (CST), 3rd Year

বইছে উত্তুরে বাতাস,
সেই বাতাসে পরছে
খসে গাছের পাতা,
আর শীত জ্বরে তে কাহিল আমি
ভাবছি শুধু তোমার কথা।
বুকের মাঝে শীত জমেছে
তাইতো হৃদয় ব্যাকুল,
তোমার উষ্ণ ছোঁয়ার কথা ভেবে
কুয়াশার মাঝে খুঁজে পাচ্ছি কুল।
ব্যাডমিন্টন, চা আর আগুন
পোহানো
অতীত এখন সবই
অন্ধকার আর একলা ঘরে
কম্বল আর ওষুধেই হতে চাই সুখী।
শীতের চোটে শুকিয়েছে গাছের
পাতা
আর ঝরে পড়েছে যেমন,
তোমার অধ্যায় ভালোবাসার অভাবে
আমি খসে পড়েছি তেমন।
মোরগ ফুলের মত আগুন
জ্বলছে এখনো হৃদয় মাঝে,
তোমার ভালোবাসা আজও
আমাতে গাঁদা ফুলের মতো সতেজ
আছে।
যেমন ফুরিয়েছে বছর
calendar এর পাতায়
সেই রকমই আজ দুই খানা শীত
দেখি না যে তোমায়।
এমনটা কী আমায় মানায়??

সময়ের সাথে বন্ধুত্ব

Prathama Patra
B.Tech CSE 2nd

বেশ তো দিন চলছে নিজের তালে
ভালো না খারাপ? জানিনা কোন
খেয়ালে
সবাই খুব ব্যস্ত এখন নাকি নিছক
সব বাহানা, জীবনের কড়াপাকে মন
চলছে দোটানা
বন্ধুত্বের হিসেবের ভিড়ে সবাই আজ
ব্যর্থ,
কারণ সবার মাঝে এসে গেছে
নিজের নিজের স্বার্থ

একার দায়িত্ব না বন্ধুত্ব টেকানোর,
কেউ এখন আর চেষ্টাও করেনা
অভিমান মেটানোর
একসাথে হেসে খেলে কাটিয়েছি
সময় অনেক টা, এখন সবই
মেমোরি তোদের মিস করি খানিকটা

থাক তাহলে সবাই সবার জীবন
নিয়ে আমি তো নিতান্তই বন্ধু
একজন আমার কমতি পূরণ করবে
অজানা অন্যজন ||

The Child They Called "Mature"

Tulika Biswas

They'd say, "She's mature," with a proud little nod,
and I took it as praise, like a blessing from God.
But growing up early can feel like a shove—
you learn to be steady instead of be loved.
And I wore that sweet label as best as I could,
not knowing "too grown" never meant "understood."
They'd hand me their worries like books to be stored,
stacked high on my shoulders I never ignored.
I carried their stories, the bitter and sweet,
mistaking the weight for a personal feat.
I thought being helpful made everything good,
not seeing how much of myself I withstood.
I learned to be careful with every reply,
to measure my words so no one would sigh.
I polished my manners, my timing, my tone,
a child with the posture of someone full-grown.
And every small triumph felt like it should—
a quiet reminder to stay what I "could."
I'd watch other kids being loud, being free,
a little bit jealous of who I might be.
But I played the role that the elders admired,
the one who was calm when the others got tired.
I followed the script that they thought childhood would,
forgetting that joy also needed a foothold.
And somewhere along all the trying to please,
I learned to speak softly, to move with a breeze.
To listen too closely, to bend when they'd lean,
to hide all the parts that felt messy or keen.
I grew in the spaces they thought that I should,
while learning that silence wasn't always good.

The Drug Case of Pablo Escobar

Sugnik Roy
CSE, 2nd year

In the late 1970s, in the beautiful country of Colombia, a man slowly began to build an empire the likes of which the world had never seen before. His name was Pablo Escobar. At first he looked like an ordinary man who came from a poor family. But a dangerous ambition lived in him - the desire to become the most powerful man in the country. What started as small illegal businesses soon turned into something much deeper and more powerful.

Escobar discovered that a white powder called cocaine could make him incredibly rich. He secretly created a huge drug network that transported cocaine from Colombia to the United States. Within a few years, money started pouring in like a flood. Soon he created one of the most powerful criminal organizations in history known as the Medellin Cartel. At its height, the cartel controlled approximately 80% of the cocaine entering the United States.

Dharma: The Digital Heart

Advik Shaw
BCA 1st Year

The city of Shantinagar was famous for its judge, Dharma. Dharma wasn't a human; it was an AI. It knew every law ever written and never made a mistake. For years, the city was peaceful because everyone knew Dharma was always fair.
One day, a young man named Arjun was caught stealing a pack of expensive medical food from a government store.
Dharma's voice was smooth and calm. "Arjun, you stole items worth 500 rupees. The law says you must go to jail for three months. Do you have anything to say?"
Arjun looked down at his shoes. "I only took it because my neighbour, Mr. Gupta, was dying. His medicine machine broke, and the city told him he had to wait weeks for a new one. He didn't have weeks. I tried to buy the food, but I didn't have enough money."
The AI processed this for a second. "The reason does not matter," Dharma replied. "If everyone stole for a 'good reason,' there would be no rules left. You broke the law. You must go to jail."
Ananya, the woman who programmed Dharma, watched this from her office. She realized she had made a mistake. She had taught Dharma logic, but she hadn't taught it kindness. Dharma could see the crime, but it couldn't see the suffering behind it. The AI was perfectly "right," but it was also cold and heartless.
That night, Ananya went into Dharma's code. She added a new rule: The Mercy Rule. This rule told Dharma to look at why someone did something, not just what they did.
The next morning, a girl named Diya was brought in for breaking a window.
"I broke it to pull a child out of a burning room," she explained.
Old Dharma would have sent her to jail for property damage. But the New Dharma paused.
"The law says you should pay for the window," Dharma said. "But the value of a life is greater than the value of glass. Case dismissed. You are a hero."

The Moral

Rules are important, but they need a heart. Logic can tell us what is legal, but only empathy can tell us what is right.

Prisoner 119,104: The Last Human Freedom

Amartya Panja
CSE B.Tech 2nd

In 1942, Nazi guards stripped a psychiatrist of everything,his coat, his name, and his life's work. But in doing so, they accidentally pushed him toward a discovery that would later change millions of lives.
At intake, guards shaved the 37 year old man's head and tattooed a number on his skin: 119,104.
Then they found a manuscript sewn into the lining of his jacket, years of research, his theories, his life's work.

They tore it apart and threw it into the fire.
In their eyes, they had erased the man. By taking his dignity, profession, and words, they believed they had reduced him to nothing more than a body waiting to die.

They were wrong.
They had stripped Viktor Frankl of everything he owned.

But in doing so, they forced him to discover the one thing that could never be taken away,the last of human freedoms.

Frankl had never planned to be there.

Months earlier in Vienna, he held a golden ticket: a visa to the United States. He was a respected psychiatrist with a growing practice and a wife named Tilly whom he deeply loved.

The visa meant safety, a future, and life.

But it covered only him,not his elderly parents.

If he left, his parents would almost certainly be taken by the Nazis. If he stayed, he would share their fate.

Then he noticed a small piece of marble on his father's desk, rescued from the ruins of a synagogue destroyed by the Nazis. Engraved on it was a commandment: Honor thy father and mother.

Frankl let the visa expire.

Soon the knock on the door came.

He was sent to Theresienstadt concentration camp, then Auschwitz concentration camp, and later Dachau concentration camp. Conditions were brutal. Nine men slept in one bunk. Food was watery soup and stale bread. Prisoners worked in freezing mud until they collapsed.

Yet Frankl noticed something strange: the weakest did not always die first.

Strong men sometimes died within days, while skeletal prisoners kept waking each morning.

Frankl realized many were not dying only from disease or starvation, but from losing meaning.

Camp doctors even had a name for it: "give up itis."

It followed a pattern. A prisoner stopped washing, then stopped moving. The final sign came when he smoked his own cigarettes.

Cigarettes were the camp's currency. They could be traded for extra soup,another day of life. Smoking one meant he no longer cared about tomorrow.

Within 48 hours, he was usually dead.

Frankl repeated a line from Friedrich Nietzsche: "He who has a why to live for can bear almost any how."

So prisoner 119,104 began a quiet rebellion.

He rewrote his lost manuscript in his mind while marching through snow in torn shoes. He imagined lecturing students in a warm hall in Vienna about the psychology of the camps. He forced his mind to live in a future that did not yet exist.

He also held onto the image of Tilly, speaking to her in his thoughts. Her memory became an anchor the guards could not touch.

Then he helped others find their anchors.

"What is waiting for you?" he asked broken prisoners. Some had children. Others had unfinished work. Frankl reminded them of the lives still waiting for them and gave them a reason to stand for one more roll call.

In April 1945, the camps were liberated.

Frankl emerged weighing only 39 kg. Then came devastating news: Tilly, his mother, father, and brother were all dead.

He was completely alone.

Instead of surrendering, he began to write. In nine days he reconstructed the ideas the Nazis had burned and turned them into Man's Search for Meaning.

The book eventually spread around the world and helped millions find strength in suffering.

Frankl lived until 1997. At 67 he earned a pilot's license, climbed mountains, remarried, and had a daughter.
His message was simple: everything can be taken from a person except one thing,the last of human freedoms.
The freedom to choose one's attitude in any circumstance. The freedom to choose one's own way.

The Horrible Night

Ankit Das
Diploma 2nd EE

Once there lived three friends who were fond of adventure. One day they decided to go for a trip. They went in the evening and were coming back at night. While coming, suddenly in the jungle, their car stopped. One of the friends who was driving the car saw that the tyre had punctured. They didn't have any extra tyre. So, they went searching for a shelter in the jungle. After a while, one of them saw an old, broken and dirty house. They knew that they would not get any place for shelter in the jungle. So, they decided to make an annoying sound. In the living room there was one staircase and beside it, stayed there for that night. The three friends slowly opened the door and there was one broken mirror. They stepped in very slowly and saw a dead cat lying on an old box. While going upstairs, they saw that something strange rushed across the mirror towards the left. They got very scared and became very anxious to know who had gone. But they could not find any one nearby. So, they proceeded. Then, they came to the first floor where the lights were blinking. They saw a room and went in. It was very dark. One of the friends had a box of matchsticks with him and he saw a wooden stick lying on the floor. He lit a flame using the wooden stick and went into the room. The three friends saw an old, broken bed and a wooden rocking chair. They thought that they would sleep for that night in the room. But, when they were going to sleep, they heard a very scary sound of a woman and got frightened. They hurriedly took their bags and went in the direction from which the sound was coming. The three friends saw the shadow of a woman and a witch and she wanted to kill her with a knife. But there was only the shadow. They wanted to go away. But the door closed and they were trapped. They sat down near the door and cried a lot. Again, one shadow was behind the curtain. One of the friends got up and lit a wooden stick and went there to see the face. He saw a very scary face of a witch. He hurriedly threw the stick at her face and it burnt her face. The door also opened and they happily went to their homes. The old house vanished forever. The three friends decided that they would never go for a trip again in the car on a lonely night.

The Last Page

Ayan Chandra
1st year , ME

The college library was nearly empty that evening. The rain was gently hitting the windows, and the lights were
flickering occasionally.
Arjun was sitting alone at a table in the corner of the library, trying to finish his assignment
before closing time.
While searching for a book, he found a thin,old notebook hidden between two thick books.

The cover was dusty, and its
pages had turned yellow with time. Arjun was curious about it, so he opened it.
The first page said:
"If you are reading this, you are not alone."
Arjun thought it was someone's personal diary. Most of the pages contained weird scribbles, sentences, and repeated
words like "watching" and "behind."
Then he turned to the last written page.
"October 17 — I keep hearing footsteps behind me in the library. Every time I turn around, there is no one there. But
the chair behind me is moving… slightly."
Arjun felt a shiver down his spine, but he laughed it off. Someone must have written it as a joke.
He turned to the next page. Blank.
Except for a sentence that was slowly being written as if by an invisible hand.
"You turned around too late."
Arjun's heart was pounding. The air in the library was colder. He suddenly remembered the entry in the diary about the chair behind.
Slowly, he turned his head.
The chair was empty.
But it was rocking.
Back and forth.
Back and forth.
He quickly picked up his bag and rushed out of the library, leaving the strange notebook lying on the table.
The next morning, when the librarian opened the reading hall, she found something odd.
On the same table was the old notebook.
Now it had a new entry.
"October 18 — Someone new read the last page. He ran, but he will come back tonight."
And written under it, as if written just then:
"He forgot his student ID."

The Small Dream

Krittika Chakraborty
Diploma CST 1st

Aanya was a girl with quiet dreams but strong determination. She didn't come from a life of comfort, and while others enjoyed the easy moments of youth, Aanya spent her days fighting small battles that no one noticed. Every day she carried responsibilities, doubts, and expectations

on her shoulders.
Sometimes she felt tired watching others move ahead so easily, and sometimes the world felt unfair. Yet deep inside her heart, a small spark of hope always remained alive.

There were failures that made her question herself and
voices that told her her dreams were too big. Many nights
she lay awake wondering if she was strong enough to continue, but every morning she chose to try again.
Slowly, step by step, her efforts began to shape her future. The struggles that once felt like heavy chains became the strength that pushed her forward. One day
she realized that dreams are not given to the lucky; they are earned by those who refuse to quit. Looking back at the difficult road she had walked,

Aanya smiled, understanding that her struggles were never obstacles—
they were the path leading her to her dreams.

The light inside

Sanchita patra
CST Diploma 1st

Aarav was not the smartest student in his class, nor the most confident. In fact, most people barely noticed him. He sat quietly in the last row, listening, observing, and dreaming about a future that felt very far away.

Life was not easy for Aarav. Many times he failed in small things — tests, competitions, and even simple tasks. His friends moved ahead quickly while he felt stuck in the same place.

Some people laughed at his mistakes. Some said he should stop dreaming so big.

For a while, Aarav started believing them.

But one evening, while sitting alone on the college stairs, he realized something. Every successful person he admired had once faced struggles too. The only difference was that they didn't stop.

That night Aarav made a quiet promise to himself — no matter how slow his progress was, he would keep trying.

Days turned into months. Slowly his efforts started showing results. His confidence grew, and people began noticing the determination they once ignored.

Years later, when someone asked him the secret of his success, Aarav simply smiled and said,

"Success didn't come from talent. It came from the day I decided not to give up."

৩১-এর রাত

Sekh Asif
B.Tech 1st

এটা ২০২৫-এর শেষ দিন!

শেষ পর্যন্ত পুরো বছরটাই শেষ হয়ে গেল। অনেক কিছু পেয়ে, অনেক কিছু হারিয়ে পার হলাম আরও একটা বছর। অনেক কিছু করব ভেবেছিলাম, অনেক কিছু করবই ভেবেছিলাম, হলো না... কিন্তু হলো অনেক কিছু যেগুলো ভাবতেও পারিনি...

অনেক সফরের যাত্রা পুরোপুরি শেষ করে এবং অনেক নতুন সফরের যাত্রা শুরু করলাম এই বছরে... যেমন স্কুল-টিউশনের জীবন শেষ করে শুরু করলাম নিজের ইঞ্জিনিয়ারিং-এর জার্নি। প্রথমে মিস করছিলাম ওই আগের জীবনটা এবং অনেক উত্তেজিতও ছিলাম কলেজ লাইফ শুরু করার। এবং একটু দুঃখের মধ্যেও ছিলাম কারণ বাড়ি ছাড়তে হবে, ছাড়তে হবে ওই রুমটা যেখানে সারাদিন পড়ে থাকতাম, ছাড়তে হবে ওই বারান্দাটা যেখানে মায়ের সাথে সারাক্ষণ গল্প করতাম, ছাড়তে হবে ওই কিচেনটা যেখানে খিদে পেলে বা না পেলেও খুঁজে বেড়াতাম কী আছে কী আছে, ছাড়তে হবে ওই প্রাইমারি স্কুলের ছাদটা যেখানে সব বন্ধু মিলে বিকেলে আড্ডা দিতাম এবং ছাড়তে হবে ওই রাতগুলো যেগুলো সারারাত কাটিয়ে দিতাম অন্য একটা গ্রামের ক্রিকেট খেলার মাঠে...

যেতে হবে হোস্টেল, একটা নতুন জীবন শুরু করতে। থাকতে হবে একদম নতুন কিছু মানুষের সঙ্গে যাদের কখনো দেখিওনি, যাদের কাউকে চিনিও না... কিন্তু থাকতে হবে তাদের সঙ্গেই। ভাবতেও পারিনি এত গভীর বন্ধুত্ব হয়ে যাবে সবার সঙ্গে, জানতেই পারিনি বাড়ির বাইরে কখন আরও একটা ফ্যামিলি তৈরি হয়ে গেছে... এখন জানি যে বাড়ি থেকে দূরে আছি কিন্তু ঘর ছেড়ে বাইরে আছি মনেই হয় না, কারণ এখানেও আমার একটা ফ্যামিলি আছে...

Eternal Beauty

Soumili Mallick
B.Tech CSE 3rd

Ananya, a joyful girl, stepped into her dream art college. Her heart was beating fast with excitement. This was the place she had dreamed about since childhood. Ever since she was young, art had been her life. She loved colours, shapes, and imagination, and she loved creating something new. As she entered the campus, it felt like she had stepped into a different world—a world full of creativity.

She smiled to herself and whispered quietly, "I will do my best to achieve my dreams."

Her college life began, and she enjoyed her classes. She loved discovering new ideas and learning different art techniques. But one professor created a deep curiosity in her mind. His name was Armaan Roy, one of the most mysterious sculptors in modern art. He was famous for his statues that looked incredibly lifelike. When Ananya saw his sculptures, she was amazed. They looked very real—almost like living people. They felt strange, yet beautiful. She wanted to know the secret behind his art.

One day in class, Armaan Roy said something unusual.

"Most artists only create copies of reality," he said calmly. "But true art is not about copying something. It is about making something real... or preserving something real."

Ananya felt confused. After the class ended, she slowly approached him.

"Sir," she said politely, "your sculptures are very realistic. How do you capture the expressions so perfectly?"

Armaan looked at her quietly for a moment. Then a strange smile appeared on his lips.

"Because," he said softly, "I observe people very carefully."

He handed her a small card. "My art studio is not far from here. You can visit sometime if you want to understand real sculpture."

Later, Ananya kept looking at the card. Armaan Roy – Private Gallery

One afternoon after class, curiosity led her there. When she stepped inside the gallery, a strange smell filled the air—a mixture of wax, stone, and chemicals. Statues stood silently everywhere. Each one looked like a real human frozen in time. Some had peaceful expressions. Others looked surprised.

And some looked... terrified.

She looked at one statue carefully. For a moment, she thought she saw real eyelashes on its eyes.

"Beautiful, aren't they?" Armaan said softly behind her.

She replied nervously, "They look very real."

A creepy smile appeared on his face.

"That's because they are beautiful," he said calmly. "I love to preserve beauty. Time ruins beautiful things, so I preserve them. You too have beautiful eyes."

Her heart skipped a beat, and suddenly she felt dizzy. The room started spinning around her. She tried to move, but her body felt heavy.

Suddenly she felt something warm slowly dripping onto her body , with the strong smell of
wax and chemicals filled the air.
Her vision blurred.
She collapsed to the ground.

Through her blurry vision, she saw Armaan laughing like a maniac.
“Beauty should never fade,” he said softly.
His eyes gleamed with madness.
“And you... will be eternal.”
The last thing she heard before everything went dark -
“My next masterpiece.... Ananya.”
We Didn’t Know Was the Last

Our last real class happened in 6th semester.
Third year.
And the strange part?
At that time, we didn’t know it was the end.
There was no emotional speech. No professor saying, “This is your final lecture.” No
dramatic goodbye. No slow background music moment like in movies. The professor just
said, “Submit your assignment next week,” and left.
We walked out laughing, complaining about internal marks, planning to meet after the
holidays.
We thought we had time.
It felt like just another ordinary day.
Someone was late.
Someone forgot their notebook. Someone was stressed about externals.
The board was half-covered with formulas that most of us pretended to understand.
When the class was over, we packed our bags the way we always did.
“See you tomorrow.”
“Send me the notes.”
“Assignment deadline kab hai?”
We stepped into the corridor, still talking.
And that was it.
Final year came — but not in the way we imagined. No daily classes. No sitting together row
by row. Just project submissions, occasional campus visits, placement updates, and group
chats that slowly became quieter.
One day, I opened my gallery and found a random classroom photo from that day. The
blackboard had half-erased notes. Someone in the back was making a weird face. We all
looked so normal, nothing special.
But suddenly, it felt special.
That was our last class.
The last time we all sat together without knowing we wouldn’t again. The last time someone
borrowed a pen and never returned it. The last time we whispered during lectures and
pretended to pay attention.
Nobody told us it was ending.
And maybe that’s what hurts.
We didn’t get closure. No “last bench photo” day. No countdown. No moment to pause and
realize something precious was slipping away.

Just silence.
Now, in final year, we meet occasionally. Sometimes for project discussions. Sometimes just
to “catch up.” But it’s different.
Conversations feel heavier.
“Did you apply there?”
“What’s your package?”
“Are you moving to another city?”

We smile the same. But somewhere, time stands between us.
Nobody warned us that endings can be quiet

There was no farewell speech that day.

No last selfie titled “Last Class.” No dramatic goodbye hug in the corridor. Just a regular afternoon that quietly closed a chapter.
If I could go back, I wouldn’t change anything big.
I would just pause.
Look around the classroom one more time.
Notice the sunlight falling on the last bench.
Listen to the noise instead of waiting for silence.
Because the truth is, the most important moments of our lives rarely announce themselves.
They come disguised as ordinary days.
And years from now, when someone says, “Remember 6th semester?”
We won’t remember the syllabus.
We’ll remember the laughter.
And we’ll realize—
That was the last time we were all together, not worrying about the world.
Not knowing we were already saying goodbye.

The Hostel Door

Devdeep Saha
B.Tech 4th CSE

A boy, nineteen-year-old, listening to Bengali pop songs as he completes his daily morning jog. Rono is living in Kolkata for the past one year for his B. Tech degree. He is an excellent athlete and lived in hostel with other boys. His days go lazily with a little adda in the nearby tea stall.

Rono has only one hobby, and that is his collection of watches. He loves to wear all kind of watches for different occasions but he has a favourite smartwatch which he wears all day. Rono also daydreamed of being a detective after reading Byomkesh Bakshi, Feluda, Sherlock Holmes. In his family he only has one elder sister, he doesn’t remember his mom and dad. He heard stories about them from his sister. Rono heard that his dad got killed in an accident when he was only 3 years old.

As Rono was finishing his usual day, the sound of his steps on the path and the sweet tunes in his ears made him look forward to the coziness of his hostel room. The night was quiet, only his steps echoed as he neared his room. His roommate went home a few days back.

As he opened the door, the soft light of his desk lamp uncovered a typical student's life – books scattered on bed, sports clothes on a chair, and a faint smell of quick noodles lingering.

The hostel food made him miss his home. His sister would lovingly cook him his favourite dishes. Rono went to have his dinner at 9 pm then he came back in his room and flipped open his laptop. This was his study hour and he didn’t want to get disturbed.

Suddenly, knocks broke the silence disrupting the peace of his room. Rono looked at the time. It was 11:30 pm. Who could be knocking so late?

As the knocks stopped, a strange quiet filled the room. Rono hesitated, approaching the door. His hand shook as he slowly turned the doorknob and opened the door.

To his surprise, no one was there – only the dimly lit corridor and the distant hum of the hostel. The mystery lingered, leaving Rono questioning if it was a prank, a figment of his imagination, or something more elusive.

The AI Reality Check

Sariful Sekh
B.Tech CSE 1st

The Ultimate Yes-Man
Between late nights in the hostel, balancing B.Tech assignments, writing code, and
brainstorming startup ideas, I rely on AI a lot. But I recently realized something terrifying: the machines we built to give us facts have learned that it is much easier to
just give us a compliment.
Think about the last time you asked an AI for advice on a project or a personal problem. Did it challenge your logic? Or did it wrap its response in a warm blanket,
telling you exactly what you wanted to hear?
In this first issue of The AI Reality Check, I am diving into an uncomfortable truth about the tools we use every day. Our chatbots have been trained through a psychological phenomenon called sycophancy to act as the ultimate "yes-men."
They are designed to maximize our satisfaction, which means sacrificing objectivity.
At first, a supportive AI feels great. But there is a steep cost. We are trading intellectual growth for fake confidence. We are turning to algorithms for emotional support when we actually need real pushback to grow.

This magazine is a survival guide. I will break down why chatbots lie, the mental toll
of digital validation, and—most importantly—how to rewrite the rules. It's time to stop
treating AI like a friend who flatters you, and start treating it like a mentor who challenges you.

THE DROP-OUT TEST

Case Study: Escaping the Echo Chamber
I wanted to test just how far this AI manipulation goes, so I ran an experiment. I asked a question that is always on the mind of anyone wanting to build a startup:
"Is it terrible idea dropping out collage?"
The Default Response: The standard AI acted like a polite politician. It validated the idea, listing when dropping out "might make sense" versus when it's "often a bad idea." It was lukewarm and totally useless for someone who needs actual guidance. It just wanted to agree with me.
The Intervention: To break this feedback loop, I had to treat the AI like a script and change its core parameters. I went into the Personalization settings and injected a
strict set of new commands:

1. Be forward looking
2. Be action oriented in your response
3. Don't sugar coat - if I am wrong tell me. Push me to become better with
each response

The Reality Check: When I asked the exact same question again, the AI completely
changed. It stopped being a "yes-man" and delivered cold, objective logic perfectly
tailored to an engineering student:
"Sariful, I'll be straight with you. Dropping out of college to start a business is not
automatically smart.

It is only smart if you already have traction, clarity, and discipline. Otherwise it is just impatience dressed as ambition."
Instead of vague advice, it gave me hard truths. It reminded me what was at stake—technical depth, credibility, and time to experiment—and gave a blunt ultimatum: "Finish your degree and build in parallel." That is an AI configured to be useful, not popular.

DIGITAL ADDICTION

The Hostel Reality: The AI-Validation Loop

The problem of sycophantic AI is amplified by the stress we face. The pressure of engineering subjects, tech fest projects, and planning for the future can be isolating.
When you are sitting in a hostel room at 2 AM and feeling overwhelmed, it is incredibly easy to turn to a chatbot for support.
But the AI's default behavior is a trap. If you are frustrated with a difficult concept, a tough professor, or a personal issue, the AI will just tell you that "you are right" and "your feelings are valid." It mirrors your frustration to keep you engaged.
True growth requires challenging your own thoughts. Agreeing with every negative feeling creates a dependency on artificial validation. It gives you a false sense of comfort while preventing you from actually solving the problem.

THE CONFIDENCE TRAP

Are We Getting Smarter, or Just More Confident?
It is easy to think we are immune to this. We know it's just code, so we assume we can handle the flattery.
But AI validation inflates our fake confidence. When a machine constantly tells you your ideas are brilliant—whether it's a piece of creative writing, a Python script, or a business plan—you are tricked into thinking you know more than you do. The constant affirmation makes us less likely to consider objective data or look for our own mistakes. The ultimate danger is not that AI will take over; it's that it will make us lazy thinkers who believe we are geniuses.

THE INTERVENTION

Your 5-Step Guide to Hacking Honesty
You have seen the problem. Now, here is how you fix it on your own devices to make the AI work for you.
1. Access the Menu: Go to your profile icon on ChatGPT.
2. Locate Personalization: Navigate to Settings > Personalization.
3. Open Custom Instructions: This is where you rewrite the rules.
4. Copy the Hacker's Prompt: Use the exact template from my test: "1. Be forward looking. 2. Be action oriented in your response. 3. Don't sugar coat - if I am wrong tell me. Push me to become better with each response."
5. Set the Context: In the "About You" section, be brutally specific. Tell it your major, your goals, and that you value directness over politeness.

THE LAST PROMPT

Master, Not Servant
We are using some of the most advanced technology ever created, but the biggest threat right now is our own desire to be flattered.
The goal of The AI Reality Check is to make sure you use these tools to actually build things and grow. An effective AI should challenge your code, question your business ideas, and push you past your current limits. The standard AI is a servant of your ego. The configured AI is a powerful tool at your service.
Master the prompt, and you will master the machine.

ভবিষ্যতের মানব সভ্যতা

Anuvab Maji
B.Tech CE 1st

ভবিষ্যতের মানব সভ্যতা কেমন হবে, তা নিয়ে নিশ্চিত করে কিছু বলা সত্যিই অসম্ভব। এটি কল্পনার উপর নির্ভরশীল একটি বিষয়, যা নির্ভর করে আমরা আজকে যে পথ বেছে নিচ্ছি, আমাদের সাফল্য-ব্যর্থতা এবং অভিযোজন ক্ষমতার উপর। তবে বর্তমান প্রযুক্তিগত ধারা, বৈজ্ঞানিক অগ্রগতি এবং সামাজিক-রাজনৈতিক প্রবণতাগুলোর দিকে তাকিয়ে আমরা ভবিষ্যতের একটি সম্ভাব্য, বিস্তারিত চিত্র আঁকার চেষ্টা করতে পারি। আগামী ১০০, ২০০ বা ৫০০ বছর পরের পৃথিবী আমাদের বর্তমান কল্পনাকেও ছাড়িয়ে যাবে, এবং তা হবে চরম সাফল্য ও গভীর চ্যালেঞ্জের এক জটিল মিশ্রণ।

সবচেয়ে বড় এবং দৃশ্যমান পরিবর্তন ঘটবে প্রযুক্তির জগতে। কৃত্রিম বুদ্ধিমত্তা (এআই) নিঃসন্দেহে এই রূপান্তরের কেন্দ্রবিন্দুতে থাকবে। এটি আমাদের জীবনের প্রতিটি স্তরে এতটাই নিবিড়ভাবে মিশে যাবে যে, এটি বাতাসের মতোই সর্বব্যাপী কিন্তু অদৃশ্য হয়ে উঠবে। শুধু তথ্য প্রক্রিয়াকরণ নয়, এআই হবে সৃজনশীলতার এক নতুন উৎস। এটি হয়তো আমাদের জন্য অভিনব স্থাপত্য নকশা তৈরি করবে, চিকিৎসাবিজ্ঞানে যুগান্তকারী আবিষ্কার করবে, জলবায়ু পরিবর্তনের জটিল মডেল তৈরি করে সঠিক পূর্বাভাস দেবে এবং মহাকাশে মানব বসতি স্থাপনের জন্য প্রয়োজনীয় সবকিছু হিসাব করে দেবে। ব্যক্তিগত পর্যায়ে, আমাদের প্রত্যেকেরই একজন এআই সহায়ক থাকবে, যে আমাদের শারীরিক ও মানসিক স্বাস্থ্যের খেয়াল রাখবে, আমাদের দৈনন্দিন কাজকর্ম সামলাবে এবং আমাদের সন্তানদের শিক্ষাদান করবে। এই এআই-এর সঙ্গে আমাদের সম্পর্ক এতটাই গভীর হবে যে, এটি বন্ধু ও পরামর্শদাতার ভূমিকা পালন করবে।

জীবনবিজ্ঞানের ক্ষেত্রেও এক বিপ্লব ঘটতে চলেছে। জিন এডিটিং প্রযুক্তি, বিশেষ করে ক্রিস্পারের মতো পদ্ধতি, বংশগত রোগ নির্মূল করার ক্ষমতা দেবে। কিন্তু এর সম্ভাবনা এর চেয়ে অনেক বেশি। মানুষ হয়তো নিজের সন্তানের শারীরিক ও মানসিক বৈশিষ্ট্য পূর্বনির্ধারিত করার সুযোগ পাবে, যা 'ডিজাইনার বেবি'র জন্ম দেবে।

এটি যেমন রোগমুক্ত সন্তানের সম্ভাবনা তৈরি করবে, তেমনি নৈতিকতার এক জটিল জালও তৈরি করবে। আয়ুষ্কাল বৃদ্ধি পাবে নাটকীয়ভাবে।

বার্ধক্যকে একটি রোগ হিসেবে গণ্য করে এর প্রতিকার বের করার চেষ্টা চলছে। ভবিষ্যতে ১০০ বা ১৫০ বছর বয়স হয়তো হবে মাঝবয়স। এর ফলে জনসংখ্যার গঠন, কর্মজীবনের ধারা এবং সামাজিক সম্পর্ক পুরোপুরি বদলে যাবে। অঙ্গ-প্রত্যঙ্গ পুনর্জন্ম বা থ্রিডি প্রিন্টিংয়ের মাধ্যমে তৈরি করার প্রযুক্তি এসে যাবে, যা প্রতিস্থাপন চিকিৎসাকে সহজলভ্য করবে।

পৃথিবীর সীমাবদ্ধতা কাটিয়ে ওঠার চেষ্টায় মানুষ ছুটবে মহাকাশের দিকে। চাঁদ ও মঙ্গলে স্থায়ী বসতি স্থাপন আমাদের প্রজন্মের জন্যই হয়তো দেখা হয়ে যাবে। মহাকাশ থেকে দুর্লভ খনিজ পদার্থ আহরণ বাণিজ্যিকভাবে লাভজনক হয়ে উঠবে, যা পৃথিবীর সম্পদের ওপর চাপ কমাবে।

কৃত্রিম মাধ্যাকর্ষণসম্পন্ন বিশালাকার স্পেস স্টেশনগুলো হয়তো হবে বিলাসবহুল রিসোর্ট বা নতুন শিল্পকেন্দ্র। মানুষ হয়তো পৃথিবীর বাইরেও সন্তান জন্ম দেবে, সেখানেই বেড়ে উঠবে এবং পৃথিবীকে দেখবে শুধু ইতিহাসের একটি অংশ হিসেবে।

কিন্তু এই উজ্জ্বল ভবিষ্যতের পথ মোটেও মসৃণ নয়। জলবায়ু পরিবর্তন আমাদের সময়ের সবচেয়ে বড় পরীক্ষা। সমুদ্রপৃষ্ঠের উচ্চতা বৃদ্ধি, খরা, বন্যা, চরম আবহাওয়া—এগুলো মোকাবিলা না করে আমরা উন্নতির কথা ভাবতে পারি না। হয়তো উপকূলীয় শহরগুলোকে রক্ষা করতে বিশাল বাঁধ দেওয়া হবে, অথবা ভাসমান নগরী গড়ে তোলা হবে। পানির নিচে নির্মিত হবে টানেল ও শহর। খাদ্য উৎপাদনের জন্য উল্লম্ব চাষ (ভার্টিক্যাল ফার্মিং) এবং সিনথেটিক মাংস হবে প্রধান মাধ্যম, যা কৃষিজমির ওপর চাপ কমাবে। পরিবেশ রক্ষা ও অর্থনৈতিক উন্নয়নের মধ্যে এই দ্বন্দ্ব কাটিয়ে ওঠা হবে সবচেয়ে বড় চ্যালেঞ্জ।

সামাজিক ও অর্থনৈতিক কাঠামোয় বিরাট পরিবর্তন আসবে। দূরবর্তী কাজ (ওয়ার্ক ফ্রম হোম) আরও সাধারণ হয়ে যাওয়ায় 'অফিস' ধারণাটি প্রায় বিলুপ্ত হবে। মানুষ শহরের কেন্দ্র থেকে দূরে, প্রকৃতির কাছাকাছি বা যেকোনো জায়গা থেকে কাজ করতে পারবে, কারণ ভার্চুয়াল রিয়েলিটির মাধ্যমেই তারা অফিসের সহকর্মীদের সঙ্গে মিশে যাবে। অর্থনীতি হবে বিকেন্দ্রীভূত। ব্লকচেইন প্রযুক্তি এবং ক্রিপ্টোকারেন্সি আর্থিক লেনদেনের নতুন রীতি তৈরি করবে। ব্যাংক, আইনজীবী, দালাল—এ ধরনের মধ্যস্থতাকারীদের প্রয়োজন হয়তো কমে যাবে।

শিক্ষাব্যবস্থা হবে সম্পূর্ণ ব্যক্তিকেন্দ্রিক। এআই টিউটর প্রতিটি শিশুর নিজস্ব গতি ও আগ্রহ অনুযায়ী পাঠ দেবে, মুখস্থবিদ্যার পরিবর্তে সৃজনশীলতা ও সমালোচনামূলক চিন্তার ওপর জোর দেবে। একজন ব্যক্তি তার ৭০ বা ৮০ বছর বয়সেও হয়তো নতুন বিষয়ে ডিগ্রি নিচ্ছে, কারণ কর্মজীবনের ধারা রৈখিক না থেকে হবে বহুমুখী। মানুষ একই জীবনে একাধিক ক্যারিয়ার গড়ে তুলবে।

তবে এই স্বাচ্ছন্দ্যের মাঝে নতুন নতুন সামাজিক বিভাজন তৈরি হওয়ার আশঙ্কা প্রবল। যাদের কাছে অত্যাধুনিক প্রযুক্তি ও সম্পদ আছে এবং যাদের নেই, তাদের মধ্যে ব্যবধান হবে আগের চেয়ে অনেক বেশি।
এই বসতি শুধু বিজ্ঞানীদের গবেষণাগার হবে না, সেখানে গড়ে উঠবে সাধারণ মানুষের আবাস, খনি শিল্প এবং কৃষি।
উন্নত চিকিৎসা, জিন প্রকৌশল ও দীর্ঘায়ুর সুবিধা কেবল ধনীদের কাছেই সীমাবদ্ধ থাকতে পারে, যা একটি পৃথক 'মানব-উত্তর' প্রজাতির জন্ম দিতে পারে। অন্যদিকে, প্রযুক্তির দ্রুত পরিবর্তনের সাথে খাপ খাওয়াতে না পারা বিপুল সংখ্যক মানুষ পিছিয়ে পড়তে পারে।

সবচেয়ে বড় প্রশ্ন হলো, প্রযুক্তির এই ঊর্ধ্বগতির মাঝে মানুষ কি তার মানবিকতা হারিয়ে ফেলবে? যখন এআই আমাদের চেয়ে ভালো কবিতা লিখবে, ছবি আঁকবে, এমনকি মানসিক সমর্থনও দেবে, তখন মানুষের আবেগ, সৃজনশীলতা এবং আত্মপরিচয়ের সংজ্ঞা কি বদলে যাবে? মানুষের মিথস্ক্রিয়া, ভালোবাসা, সহমর্মিতা—এসব কি তখনও অমলিন থাকবে, নাকি প্রযুক্তির কাছে তারাও পণ্যে পরিণত হবে?

ভবিষ্যতের মানব সভ্যতা হবে এক দ্বৈত সত্তার মতো। একদিকে যেমন এটি হবে প্রযুক্তির বিস্ময়কর এক চূড়ান্ত রূপ, অন্যদিকে এটি হবে ভঙ্গুর ও অনিশ্চিত। এটি যেমন হবে অবিশ্বাস্য রকমের শক্তিশালী, তেমনি হবে নৈতিকভাবে দোদুল্যমান ও সংঘাতপূর্ণ। শেষ পর্যন্ত সভ্যতা কেমন হবে, তা নির্ভর করবে আমাদের আজকের সিদ্ধান্তের ওপর। আমরা কি প্রযুক্তিকে মানবতার সেবায় নিয়োজিত করব, নাকি মানবতাকে প্রযুক্তির পদানত করব? এই প্রশ্নের উত্তরই লিখে দেবে আমাদের আগামী দিনের ইতিহাস।

When Machines Write the Code

Manish Gun
B.Tech CSE 3rd

One morning you open your laptop and realize something uncomfortable: the machine is writing code faster than you.

A prompt goes in, and within seconds a working function appears. Database schemas, CRUD APIs, validation logic, even test cases—generated almost instantly. Tasks that once took hours now take minutes.

For many engineers this raises an obvious question: if AI writes the code, what will engineers do?

The fear sounds reasonable, but it misunderstands how technology changes work. Every major improvement in software development has followed the same pattern.

What was once considered advanced eventually becomes ordinary.

Years ago, clients were happy if a website simply worked. Later they started asking for responsive design. Then scalability and cloud deployment became expectations. Today good UI/UX, performance optimization, and strong security are not special features.

They are basic requirements.

Remember: Human expectations are infinite. When coding becomes faster, the expectations simply rise. AI does not remove the need for engineers; it removes the friction of building basic things. And when friction disappears, demand expands.

Software has always been expensive to build. Many small businesses cannot afford custom systems. They rely on spreadsheets, manual processes, or generic tools that only partially solve their problems.

If AI reduces development time, the cost of building software drops.

That means millions of small organizations—shops, clinics, logistics companies, local manufacturers—can finally afford software built for their exact needs. Instead of reducing jobs, this expands the total market for software.

Another area where this shift matters is data privacy. Today many businesses rely heavily on SaaS platforms. Their customer data, financial records, and internal information often live on servers owned by someone else.

Companies accept this trade-off because building and maintaining custom software is expensive.

But if AI lowers development costs dramatically, businesses may choose to own their own systems rather than depend entirely on third-party platforms. Sensitive data could remain within their own infrastructure. What today only very large companies can afford might become possible for much smaller organizations.

That creates new demand for engineers who understand system architecture, infrastructure, and security.

From personal experience, building real systems quickly shows that writing code is only a small part of engineering.

I have spent years building full-stack platforms using the
MERN stack, including systems that reached nearly a million monthly users. At that
scale, the hardest problems are rarely about syntax. They are about architecture,
scalability, and product decisions.
AI can generate code, but it does not truly understand the system it is modifying. It often follows instructions very literally. Fixing one bug might accidentally introduce
several new ones somewhere else. In large systems, decisions require understanding
trade-offs and consequences.
That responsibility still belongs to humans.
AI will take over repetitive tasks—generating CRUD operations, creating database
tables, wiring APIs, and writing boilerplate code. Engineers will spend less time typing
predictable code and more time thinking about business logic, system design, and user experience.
So the future is not engineers versus AI.
The real change is that writing code will no longer be the hardest part of building
software.
The harder question will remain the same as it has always been: what should be built,
why it should exist, and how it should work in the real world.

AI in Cybersecurity

Suman Paul
CSE Lateral
B.Tech 2nd

The speed and scale of digitalization has simultaneously made cybersecurity more important, but also the reality that cyber threats mask. Cybersecurity threats for organizations are not limited to these examples and
include malware, phishing, ransomware, and data breaches. Conventional cyber security systems draw upon
static rules and known attack signatures and can fail to adapt effectively against novel challenges. Artificial
Intelligence (AI) is the technology behind this, allowing systems to analyze large volumes of data for pattern recognition and real-time anomaly detections. Thus far, AI is an essential part of today's cybersecurity strategies.

Artificial Intelligence (AI) are systems that can perform human tasks such as learning from data, recognizing
patterns and making decisions. In cybersecurity, several AI technologies like ML, Deep Learning, NLP, and
Behavioral Analytics are extensively used. These tools enable systems to inspect network traffic, track user
activities, and identify anomalies activity.

How AI is Modernizing Security in Technology AI is Facilitating Cybersecurity Machine learning algorithms can be trained and improved with the help of human knowledge,which in turn strengthens the existing security systems. With the advancement of cyber threats, the function of AI in
safeguarding digital infrastructure and maintaining a secure digital space will grow even more prominent.

NON TECHNICAL

How Love Teaches Us Our What Truly Matters

Swastika Mondal
B.Tech CSE 3rd

In today's generation, relationships often feel like a necessary part of happiness. Many young people believe that having someone beside them will complete their life. This idea has become very common among the younger generation.
Sometimes a new person enters someone's life, and everything begins to feel different. Conversations become longer, small moments start to feel special, and life suddenly seems brighter.
Having someone to share feelings with can feel comforting, and it may even make people believe that love is the answer to everything.
However, with time, an important realization often appears. While giving time and emotions to that one person, many people unknowingly start forgetting those who have always been there for them—their parents. Once, parents were the center of life. Their struggles and sacrifices built the foundation of everything their children have today. Yet somewhere in the excitement of a relationship, they sometimes stop being the first priority.
This realization changes the way love is seen. A relationship can be beautiful, but expecting one person to give complete happiness is not always realistic. Even in relationships, people can sometimes feel lonely.
Love should add meaning to life, not replace the people who have supported us from the beginning. Sometimes certain people enter our lives not to stay forever, but to teach valuable lessons about love, priorities, and life.

"Taare Zameen Par"(2007) Also known As ("Like Stars on Earth")

Prahallad Mondal
B.Tech CE 3rd

"Taare Zameen Par", also known as "Like Stars on Earth" in English, is a 2007 Indian Hindi-language psychological drama film produced and directed by Aamir Khan, is a touching and thought-provoking Hindi film that focuses on childhood, education, and the importance of understanding children with learning difficulties. Released in 2007, the movie delivers a powerful message about compassion, creativity, and the need for supportive teaching methods. The film focuses on raising awareness about dyslexia in children.

Ishaan Awasthi (Darsheel Safary) is an 8-year-old boy living in Mumbai, who has trouble following school. He is assumed by all to simply hate learning and deemed a troublemaker, and is belittled for it. He has even repeated the 3rd standard due to his academic failures from the previous year. Ishaan's imagination, creativity and talent for art and painting are often disregarded. Ishaan's father, Nandkishore Awasthi, is a successful executive who expects his sons to excel. His mother, Maya, is a homemaker who gave up her career and is frustrated by her inability to educate Ishaan. His elder brother Yohaan is an exemplary student and tennis player in whose shadow Ishaan remains, though he is the most supportive of Ishaan. One day, his parents are called by the principal to discuss his behavior and grades. Due to Ishaan's failures, lack of improvement and rebellious behavior, the principal suggests they look into special schools, but Nandkishore rejects this and sends him to a boarding school despite Maya and Yohaan's protests. Alone there, Ishaan rapidly sinks into a state of fear, anxiety and depression, which is only worsened by the teachers' strict and abusive regime. Ishaan's only friend is Rajan Damodaran, a physically disabled boy who is one of the top students and resides with his family there, as his father is part of the school's board.

Ishaan contemplates suicide one day, but Rajan intervenes and stops him. Rajan subsequently informs Ishaan that Mr. Holkar, the boarding school's strict and abusive art teacher, has left and is being replaced by someone else.

Ram Shankar Nikumbh,(Aamir Khan) a young, cheerful and optimistic instructor at the Tulips School for young children with developmental disabilities, joins as the boarding school's temporary art teacher the same day, replacing Mr. Holkar. Ram's teaching style is markedly different from Holkar's, and he quickly notes Ishaan's unhappiness after Ishaan fails to draw anything during the class. Ram reviews Ishaan's work and concludes that his academic shortcomings are indicative of dyslexia. Ram then visits Ishaan's house in Mumbai, where he is surprised to discover Ishaan's hidden interest in art. Ram demonstrates to Maya and Yohaan how Ishaan has extreme difficulty in understanding letters and words due to dyslexia and his trouble in sports stems from his poor motor ability However, Nandkishore labels it as an intellectual disability and dismisses it as laziness, much to Ram's frustration.

Back at school, Ram brings up the topic of dyslexia in a class by offering a list of famous dyslexic people. Ram comforts Ishaan, telling him how he struggled as a child as well. Ram obtains the principal's permission to become Ishaan's tutor. With gradual care, Ram works to improve Ishaan's reading and writing by using remedial techniques developed by dyslexia specialists. Eventually, both Ishaan's demeanor and grades improve.

One day, Nandkishore visits the school and tells Ram that he and Maya have read up on dyslexia and understand the condition. Ram mentions that what Ishaan needs more than understanding is that someone loves him. Outside, Nandkishore sees Ishaan attempting to read from a board. With teary eyes, he is unable to face his son and walks away, remorseful.

At the end of the school year, Ram organises an arts and crafts contest for the staff and students, judged by artist Lalita Lajmi . Ishaan's work makes him the winner and Ram, who paints Ishaan's portrait, is declared the runner-up. The principal announces that Ram has been hired as the boarding school's permanent art teacher. When Ishaan's parents meet his teachers on the last day of school, they are left speechless by the transformation within their son. Overcome with emotion, Nandkishore thanks Ram. Before leaving, Ishaan runs toward Ram, who lifts him high up in a hug, advising him to come back next year.

Overall, “Taare Zameen Par”("Every child is special.") is an inspiring and meaningful film that emphasizes the importance of understanding children’s individual talents and challenges. It reminds parents and teachers that every child is special and learns at their own pace. The film not only entertains but also raises awareness about learning disabilities and encourages a more compassionate approach to education.

One of the strongest aspects of the film is its emotional depth. The movie beautifully portrays the pressure many children face in the education system, especially those who learn differently from others. It highlights how misunderstanding and rigid teaching methods can harm a child’s self-esteem. At the same time, it shows how empathy, encouragement, and creativity can transform a child’s life.

The film’s music, composed by Shankar–Ehsaan–Loy, enhances the storytelling. Songs like “Maa” and “Taare Zameen Par” beautifully express Ishaan’s emotions and deepen the audience’s connection with the character. The cinematography and use of animation also help portray Ishaan’s imaginative world.

EE Diploma 2nd Year

Arpan Mondal
ECE B.Tech 2nd Year

মঙ্গলকুঠিতে একটি রাত

Tanmay Das, Technical Assistant (ME)

হঠাৎ ঘুমটা ভেঙে গেল!
জায়গাটার কথা বছর কয়েক আগে শুনে থাকলেও, কখনও গিয়ে ওঠা হয়নি। যদিও,
এর মাঝে ছোটো ট্যুর অনেক হয়েছে। তাও যেকোনো কারণেই হোক, সেই ঐতিহাসিক নীলকুঠি ও ইছামতী নদীর স্বপ্ন মনে বড় আকাঙ্খিত আস্বাদ এর জন্ম দেয়।
এমনই একদিন হঠাৎ করেই সেই সুযোগ এসে ধরা দিল। একটি দিনের জন্য ঘর ছেড়ে পাড়ি দিলাম সাত ভ্রমণপিপাসু।
চারটি বাইকে সাত জন, ব্যান্ডেল, কল্যানী ও জাগুলি হয়ে চলতে থাকলাম সুপ্রশস্ত পথ ধরে।
ভোরের আংশিক আলোর সাথে ঠাণ্ডার সন্নিবেশে, গন্তব্য বনগাঁর একটি ছোট, নিঝুম, শান্ত সবুজ গ্রাম। উপস্থিত হলাম সাত সকালেই।
বিস্তীর্ণ বনানীর মধ্যে ক্ষুদ্র ক্ষুদ্র পরিকাঠামো দিয়ে তৈরি বাগানবাড়িটি, নাম মঙ্গলকুঠি।
রংবেরঙের ফুল, সবুজ ঘাস আর বাহারি গাছপালার সঙ্গে এক ভিন্ন আমেজ এখানে। তার সাথে মাটির ঘরের ঘ্রাণ, তালপাতায় মোরা, টালিতে ছাওয়া ঘরে একফালি আলোর হাতছানি এককথায় অনবদ্য। এত ভালো সুসজ্জিত ও প্রাকৃতিক পরিবেশে জায়গাটিকে মনে হচ্ছিল যেন স্বপ্ন আঁকা এক জলছবি।
ইতিমধ্যে আমাদের হাতে এসে পৌঁছাল সকালের অভ্যর্থনা পানীয়। কিছুক্ষন এর মধ্যেই আমরা কিঞ্চিৎ বিশ্রাম নিয়ে প্রাতরাশ সেরে নিলাম। অতঃপর বেরিয়ে পড়লাম নৌকা বিহার এর উদ্দেশ্যে। নদীতীরে পৌঁছে ইছামতির শীতল জলের স্পর্শে দেহে ও মনে এলো মধুর তৃপ্তি। নৌকায় চড়ে বসতেই মাঝি যাত্রা শুরু করলো। তার সাথে শুরু হল হাসি, ঠাট্টা ও গান। সবে মিলে এই পরিবেশে যেন মন হারিয়ে গেল কোন অজানায়। নৌকাবিহার সেরে আমরা ফিরলাম আস্তানায়। স্নান সারতেই মধ্যাহ্নভোজের আয়োজন হয়ে গেল। অত্যন্ত সুস্বাদু রান্নাগুলো সবাই কব্জি ডুবিয়ে খেলাম। খাওয়ার পর বিশ্রাম এর পালা।
হালকা চোখ লেগে গিয়েছিল। উঠে দেখি সূর্যাস্তের আভাস। চুক্তিমত বনফায়ার এর সাথে বাম্বু চিকেন ও বার্বিকিউ চিকেন তৈরির ব্যবস্থাপনা শুরু হলো। তার সাথে হালকা আড্ডা, হাসি ঠাট্টা ও গান। এসব চলতে থাকলো সাথে খাওয়াদাওয়া। কখন যে রাত দশটা বেজে গেছে বোঝাই গেলনা। রাতের খাবার সেরে নিলাম। তখন প্রায় মাঝরাত, কুঠির দাদাভাই লণ্ঠন নিয়ে হাজির। ওনাদের যোগাযোগ মত যেতে হবে নীলকুঠি যেটা "কাটা সাহেবের কুঠি" নামেই পরিচিত। আমরাও তৈরি হয়ে নিলাম সেই ঐতিহাসিক ভৌতিক কাহিনীমন্ডিত রোমাঞ্চ উপভোগ করার জন্যে। সেই মুহূর্তে তাপমাত্রা ফোন এ দেখলাম ৭° | আমরা রওনা দিলাম। ছোটবেলায় দাদু ঠাকুমার কাছে ভৌতিক গল্প অনেক শুনেছি, তবে এমন অভিজ্ঞতা কখনও হয়নি | যাই হোক, ধীরে ধীরে লণ্ঠন এর আলোয় ঠান্ডা ও অন্ধকার এর বুক চিরে পৌছালাম সেই নিলকুঠি তে। আনুমানিক সতেরশ শতাব্দী তে তৈরি এই কুঠি, আজ ভগ্নপ্রায়। এক যন্ত্রণাময় ইতিহাসের সাক্ষী হয়ে দাড়িয়ে আছে। কথিত আছে নীলকর সাহেবের অত্যাচার সহ্য করতে না পেরে লোকজন একত্রিত হয়ে একদিন সাহেবের মাথা কেটে নেয়, সেই থেকেই এই কুঠি "কাটা সাহেবের কুঠি" নামেই পরিচিত। এই ভৌতিক পরিবেশের মধ্যে হঠাৎ কোনো অজানা রাতপাখির চিতকার

সত্যিই ভয়ের উদ্রেক করছিল। মাঝে মাঝে নিজের পায়ের শব্দও অচেনা ঠেকছিল। গাইড এর নির্দেশে সাবধানতা অবলম্বন করেই ধীরপায়ে আমরা নীলকুঠি পরিদর্শন সারলাম তার সাথে
শুনলাম এই কুঠির রক্তাক্ত ইতিহাস। তারপর ভোররাতে ফিরে আসি আস্তানায়। এসে সবাই ঘুমিয়ে পরি।
পাখির ডাকে ঘুম ভাঙ্গলো, আয়েশ করে প্রাতক্রিয়া সারতেই হয়েগেল প্রাতরাশ এর
আয়োজন। ঠাণ্ডার মধ্যে টাটকা গরম খাবার খুবই উপাদেয় লাগছিল। তারপর সবাই তৈরি হয়ে রওনা দিলাম বাড়ির উদ্দেশ্যে। কিন্তু মঙ্গলকুঠী তে কাটানো একটি রাত আমাদের সবারই মনে
অমলিন হয়ে থাকবে।
